

ORDER

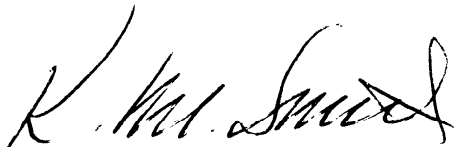

DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION

1700.10

20 Oct. 1970

SUBJ: MEDICAL KEY TO SAFETY INSIGNIA

1. PURPOSE. This order authorizes and prescribes the use of the "Key to Safety" medical insignia in **aeromedical** education and training program activities.
2. BACKGROUND. The man in the man-machine relationship is an important element in the medical factors relating to aviation safety. The use of this insignia in connection with airman medical education and training program activities will point up the concept that knowledge plus experience is a key to safety. The promotion of this theme during medical training presentations and seminars will serve as an effective reminder to airman trainees of the importance of these factors in improving safety.
3. USE OF THE INSIGNIA. The use of the Medical Key to Safety insignia (see Appendix 1) shall be used to promote the theme of the **aeromedical** education and training program. The insignia is authorized for use in exhibits, airman medical training, literature, motion picture credits, slides, Aviation Medical Examiner Seminars, and as a patch on jackets worn by **FAA** medical personnel conducting training. It should be noted that the official Departmental Seal and the FAA insignia must be used for some of these purposes and is optional for other purposes (see Order 1700.6). Accordingly, under some circumstances two insignia will be required.
4. APPROVAL AUTHORITY. The Federal Air Surgeon is authorized to approve the use of this insignia in agency **aeromedical** education and training program activities,

K. M. Smith
Acting Administrator
